

System Information	
Location	office
WAN IP Address	50.248.124.201
Date/Time of Report	2/1/2018 9:15 AM

This computer does not meet all site requirements. Please use the information provided in the table below to configure this computer to meet all site requirements.

Check	Status	Details	View Additional Information				
Operating System	Supported	This operating system is supported by this site.					
Display	Supported	The current display settings are supported by this site.					
Browser	Failed	This browser is not supported.					
Cookies	Enabled	This browser supports the use of cookies.					
Flash Plug-in	Enabled	This browser uses a supported version of the Flash plug-in (version 8 or higher).					
Launch Test Delivery	Warning	<p>The check to launch a test was not successful. This check attempts to launch a representative test in a pop-up window and automatically navigates through the test to verify that this computer can deliver operational tests. Test launch may have failed due to pop-up windows being blocked by the browser. Check the browser settings to ensure that pop-ups are temporarily allowed for this site and run the System Check again. Pop-up windows are only required for the System Check and are not required for the operational test.</p> <p>If all other checks pass and pop-ups are supported, please confirm that your school's firewall, proxy, and/or content filters allow unrestricted communication to and from the "starttest.com" domain on ports 80 (http) and 443 (https). Your local technical administrators may contact tech support if they need more information or require additional assistance.</p> <p>Note: To ensure that operational tests can run on the computers at your school, this check must pass for at least one computer per computer platform.</p>					
Internet Connection	Supported	<p>Current bandwidth available between our test delivery servers and this computer:</p> <table border="1"> <tr> <td>Download Speed:</td> <td>103600 kbps</td> </tr> <tr> <td>Upload Speed:</td> <td>3057 kbps</td> </tr> </table> <p>The quality of your local network can drastically reduce the number of simultaneous test takers, resulting in navigation delays and "Communications Errors" during the test.</p> <p>Since many computers may be sharing the same Internet connection, these speeds will fluctuate based upon the amount and type of Internet traffic at this location. Accordingly, you may see different speeds reported each time a System Check is run. To get an accurate estimate, run the system check at multiple times during the day on different days; ideally on the days of the week and times of the day at which testing will occur. Other users streaming multimedia will use large amounts of bandwidth and reduce both the available bandwidth and the number of simultaneous test takers. Contact your Internet Service Provider or local technical administrator regarding how to improve the connection speed.</p> <p>If you are using a wireless network (Wi-Fi), please consult your local technical administrator to ensure your network adheres to best practices for wireless network design. The number of devices per access point should be less than the vendor's recommendation. In addition, we recommend wireless access points with 802.11n capability using WPA2 encryption with a 100BASE-T uplink to the local area network. To reduce wireless network bottlenecks, use access points with 802.11n simultaneous dual-band (2.4GHz and 5GHz) with Gigabit uplink to the local area network. Nearby and "rogue" wireless networks, specifically those from mobile hotspot devices and smartphone tethering, will impact test performance.</p>	Download Speed:	103600 kbps	Upload Speed:	3057 kbps
